1

WHAT IS CLAIMED IS:

| 2 | 1. An apparatus comprising: |
|----|---------------------------------------------------------------------------------------|
| 3 | a processor; |
| 4 | memory in communication with the processor; and |
| 5 | a first operating system configured for use with the processor and the memory; |
| 6 | and |
| 7 | at least one computer program configured for use with the processor and the |
| 8 | memory, the at least one computer program comprising a template instantiation portion |
| 9 | configured to provide template source code and a cross compiler portion configured to |
| 10 | generate template object code from the template source code, the template object code |
| 11 | configured for use on a second operating system different from the first operating |
| 12 | system. |
| 13 | |
| 14 | 2. The apparatus of claim 1, wherein the cross compiler portion is a separate |
| 15 | computer program from the template instantiation portion. |
| 16 | |
| 17 | 3. The apparatus of claim 1, wherein the first operating system is selected from |
| 18 | OS/2, Linux, Unix, Solaris, Java Virtual Machine, Windows 2000, Windows NT, |
| 19 | Windows95, and Windows98. |
| 20 | |
| 21 | 4. The apparatus of claim 1, wherein the cross compiler is configured to compile a |
| 22 | programming language selected from Pascal, Cobol, FORTRAN, Ada, Java, C, C+, |
| 23 | and C++. |
| 24 | |
| 25 | 5. A method for automatic instantiation of templates for a cross compiler, |
| 26 | comprising: |
| 27 | providing source code; |
| 28 | extracting template information from the source code; |
| 29 | providing the template information to a template repository; |
| 30 | generating template source code in response to information from the template |
| 31 | information; and |

| 1 | using the cross compiler to generate first template object code corresponding t | | |
|----|-----------------------------------------------------------------------------------|----------------------------------------------------------------------------------|--|
| 2 | the template source code; and | | |
| 3 | wherein the first template object code is operable on a target computer system | | |
| 4 | having a linker. | | |
| 5 | | | |
| 6 | 6. | The method of claim 5, further comprising: | |
| 7 | | amending the template source code in response to template dependency on | |
| 8 | another template; and | | |
| 9 | | generating a list of the template source code as amended. | |
| 10 | | | |
| 11 | 7. | The method of claim 6, further comprising: | |
| 12 | | compiling the template source code as amended into second template object | |
| 13 | code. | | |
| 14 | | | |
| 15 | 8. | The method of claim 7, wherein the amending of the template source code | |
| 16 | comprises identifying at least one addition or change to the template source code | | |
| 17 | within the template repository. | | |
| 18 | | | |
| 19 | 9. | The method of claim 8, further comprising linking the second template object | |
| 20 | code with the linker to provide machine executable code operable on the target | | |
| 21 | computer system. | | |
| 22 | | | |
| 23 | 10. | A method for automatic instantiation of templates from source code for use | |
| 24 | with a | a cross compiler residing on an origination computer system, comprising: | |
| 25 | | providing a template repository in communication with the cross compiler; | |
| 26 | | providing source code modules; | |
| 27 | | generating at least one template information file from the source code modules | |
| 28 | using | the cross compiler; | |
| 29 | | providing the at least one template information file to the template repository; | |
| 30 | | generating template source code in response to the at least one template | |
| 31 | inforn | nation file; and | |

| 1 | | generating object code using the cross compiler and the at least one template | |
|----|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|--|
| 2 | source code file; | | |
| 3 | wherein the object code is intended for linking on a target computer system | | |
| 4 | having a operating system different in kind than that of the origination computer | | |
| 5 | system. | | |
| 6 | | | |
| 7 | 11. | The method of claim 10, further comprising amending the source code modules | |
| 8 | with the at least one template source code file associated with the at least one templat | | |
| 9 | information file. | | |
| 10 | | | |
| 11 | 12. | The method of claim 11, further comprising providing the object code to the | |
| 12 | target computing system, wherein the target computer system includes a linker | | |
| 13 | config | gured to link the object code. | |
| 14 | | | |
| 15 | 13. | The method of claim 12, wherein the linker is not configured to instantiate a | |
| 16 | template. | | |
| 17 | | | |
| 18 | 13. | The method of claim 12, further comprising: | |
| 19 | | generating a template information file list associated with the at least one | |
| 20 | template information file; and | | |
| 21 | | generating a list of the at least one template source code file. | |
| 22 | | | |
| 23 | 14. | The method of claim 13, further comprising generating at least one more | |
| 24 | template information file corresponding to the template source code file. | | |
| 25 | | | |
| 26 | 15. | The method of claim 14, further comprising generating another template | |
| 27 | inforn | nation file list associated with both the at least one template information file and | |
| 28 | the at | least one more template information file. | |
| 29 | | | |
| 30 | 16. | A system for cross compilation with automatic template instantiation, | |
| 31 | compi | rising: | |
| 32 | | a first computer programmed with a first operating system, the first computer | |
| 33 | comprising: | | |
| | | | |

| 1 | source code modules; | | | |
|----|-------------------------------------------------------------------------------------------|--|--|--|
| 2 | a cross compiler configured to generate object code modules and | | | |
| 3 | template information files from the source code modules; | | | |
| 4 | a template repository configured to receive the template information | | | |
| 5 | files; and | | | |
| 6 | a program configured to generate a list of the template information files | | | |
| 7 | template source code files and a list of template source code files, the program | | | |
| 8 | configured to locate the list of the template information files, the template source code | | | |
| 9 | files and the list of template source code files in the temporary repository, the program | | | |
| 10 | configured to employ the cross compiler to generate template object code files from the | | | |
| 11 | template source code files. | | | |
| 12 | | | | |
| 13 | 17. The system of claim 16 further comprising: | | | |
| 14 | a second computer programmed with a second operating system different in | | | |
| 15 | kind from the first operating system, the second computer in communication with the | | | |
| 16 | first computer to receive the template object code files. | | | |
| 17 | | | | |
| 18 | 18. The system of claim 17, wherein the template object code files are provided to | | | |
| 19 | the second computer using a machine-readable signal bearing medium. | | | |
| 20 | | | | |
| 21 | 19. The system of claim 18, wherein the machine-readable signal bearing medium | | | |
| 22 | is a transmission medium. | | | |
| 23 | | | | |
| 24 | 20. The system of claim 18, wherein the machine-readable signal bearing medium | | | |
| 25 | is a storage medium. | | | |
| 26 | | | | |
| 27 | 21. A signal-bearing medium containing a program which, when executed by a | | | |
| 28 | processor in response to receiving template information, causes execution of a method | | | |
| 29 | comprising: | | | |
| 30 | generating template source code in response to the template information; and | | | |
| 31 | invoking a cross compiler to generate first template object code corresponding | | | |
| 32 | to the template source code; | | | |

ROC920000236 Express Mail No. EL684625435US

| Ì |
|---|
| |

| 1 | | wherein the first template object code is linkable on a target computer system | |
|----|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|--|
| 2 | having a linker without template instantiation support. | | |
| 3 | | | |
| 4 | 22. | The signal-bearing medium of claim 21, further comprising: | |
| 5 | | amending the template source code in response to template dependency on | |
| 6 | another template; and | | |
| 7 | | generating a list of the template source code as amended. | |
| 8 | | | |
| 9 | 23. | The signal-bearing medium of claim 22, further comprising: | |
| 10 | | compiling the template source code as amended into second template object | |
| 11 | code. | | |
| 12 | | | |
| 13 | 24. | The signal-bearing medium of claim 23, wherein the amending of the template | |
| 14 | source code comprises identifying at least one addition or change to the template | | |
| 15 | source code within the template repository. | | |
| 16 | | | |
| 17 | 25. | The signal-bearing medium of claim 24, further comprising linking the second | |
| 18 | template object code with the linker to provide machine executable code operable on | | |
| 19 | the tar | get computer system. | |
| | | | |
| | | | |
